Why do we use React? Some of us might wonder why we don't just stick to HTML, CSS, and JAVASCRIPT for everything we've been doing?

Of course! It's absolutely possible to accomplish everything using regular HTML, CSS and JAVASCRIPT without using REACT. However, we chose React because it enhances our developer experience, making it more seamless and efficient

Understanding Export and Import in React.

Two types of export/import in React

1.Default export/import.

2.Named export/import.

1.Default export/import

Step-1 (export)

// Syntax

export default Header;

  oR

export default Header.js;

Step-2 (import)————————>

import Header from "./components/Header

2.Named export/import.

just write the ' export ' keyword before the variables we want to export . We won't get any error.

Can we use default export with named export ?

yes

How do we create Super-powerful variable ?

we use 'React Hooks
